1. The abstract of the disclosure is objected to because in line 2 the term "is disclosed" is used. The abstract should not refer to the specification. Correction is required. See MPEP § 608.01(b).

2. Claim 3 is objected to because of the following informalities: claim 3 currently recites trademarked phrases, such as Sony's Memory Stick <sup>TM</sup>. The use of Trademarks/Tradenames should be avoided in the claims as it may be deemed as being indefinite. Appropriate correction is required.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-2 are rejected under 35 U.S.C. 102(e) as being anticipated by Hollingsworth et al US 2003/0200379A1. Hollingsworth discloses that a computer BIOS searches for a boot disk to allow an operating system to be loaded from the disk. It is disclosed that the disk may be connected via a USB [0024]. It is disclosed that the operating system may be held in a flash memory storage [0019],[0026]. It is disclosed that the BIOS searches for a boot device through the USB [0030].

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2876

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hollingsworth et al US 2003/0200379A1. Hollingsworth discloses that which is seen above. Hollingsworth does not disclose that the USB device supports at least two types of flash media. Official Notice is taken that USB devices containing support for at least two types of flash media formats is old and well known. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the multi-format flash media reader in the system of Hollingsworth in order to allow multiple formats of flash media to be used, thereby increasing the versatility of the system. One example of a multi-format flash media would be the HP 7550 series photo printer that was on the market at least before 1/29/03. This printer is connected to the main processor via USB and is capable of reading smart media cards, compact flash cards and Memory Stick <sup>TM</sup>.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Agata et al US 2002004874A1, Nalawadi et al US

Art Unit: 2876

20030126421A1, Cochran et al US 2004/0059907, Aguilar et al 6,785,807 and Aguilar et al 6,691,195 all disclose flash memory held software.
